PROFESSIONAL SUMMARY

Senior Automation Engineer with 6+ years of experience specializing in Python-based test automation, data validation, and backend testing across large-scale distributed systems. Strong expertise in Pandas, NumPy, SQL, and data quality validation, with hands-on experience building automation frameworks and validating complex data pipelines. Proven ability to ensure data integrity, system reliability, and release quality through end-to-end automation and cross-system validation.

TECHNICAL SKILLS

Test Approaches	Agile/Scrum, SDLC, STLC, Test Case Design, Test Plan Development, Bug Life Cycle
Test Areas	Unit, Functional, Regression, UAT, Integration, API Testing
Automation	BDD Framework, TestNG, Python Behave, Selenium WebDriver, Appium
Programming	Python, Java, SQL, JavaScript, HTML, PyCharm
Data & Backend	Pandas (DataFrames), NumPy, Data Validation, Data Quality Testing, ETL Validation, Data Analysis
Databases	MySQL, SQL Joins, Aggregations, Subqueries
Tools / CI/CD	JIRA, X-Ray, HTML Reports, Git, Jenkins, GitLab CI/CD, Docker, Maven, Azure DevOps
Cloud	AWS IAM, EC2

PROFESSIONAL EXPERIENCE

Automation Engineer | Charter Communications | Denver | Nov 2025 – Present

- Designed and implemented Python-based automation frameworks for functional and data validation testing.
- Built data validation frameworks using Pandas and NumPy to process and validate large-scale datasets.
- Performed pre-code vs post-code data comparisons to ensure accuracy during releases.
- Developed automated data quality and data stability test suites to detect anomalies, nulls, and inconsistencies.
- Used Pandas DataFrames for dataset analysis, transformation, and validation of API/database outputs.
- Automated end-to-end validation workflows integrated with GitLab and Docker CI/CD pipelines.
- Supported regression, pre-release validation, and post-release data checks across distributed systems.

SDET | T-Mobile | Bellevue | May 2024 – October 2025

- Performed backend data validation and data warehouse testing using SQL across multiple systems.
- Validated consistency between source systems and downstream data warehouse layers.
- Wrote optimized SQL queries for joins, aggregations, and data reconciliation.
- Conducted API vs database validation and validated ETL processes and data transformations.
- Built and maintained automation frameworks using Appium, Selenium, and TestNG.
- Integrated automated tests into Jenkins CI/CD pipelines for continuous testing.
- Collaborated with engineering teams to identify and resolve data and functional defects.

Test Analyst | Cognizant Technologies Solutions | India | July 2021 – August 2022

- Automated functional and regression testing using Selenium, JUnit, and Page Object Model.
- Developed BDD test cases using Cucumber and Java.
- Created SQL queries for backend validation and data integration checks.
- Contributed to CI/CD pipeline configuration and automated test execution.
- Used Azure DevOps Boards, Git, Jenkins and Cypress Dashboard for test management, reporting and execution.
- Supported end-to-end regression testing for Guidewire insurance applications.

Software Tester | Blue Cloud | India | Jan 2019 – July 2021

- Developed and executed manual and automated tests for web and mobile applications.
- Created cross-platform mobile automation frameworks with Appium.

- Developed Java automation using Selenium and TestNG.
- Conducted UI and performance testing and tracked defects through resolution.
- Integrated automated tests into CI/CD workflows using Jenkins and supported Cucumber-based testing.
- Worked with AWS Connect and QTest for customer-service testing and test traceability.

Internship | Bluenet Technologies (later Blue Cloud) | India | Jan 2017 – Dec 2018

- Assisted in developing Selenium and Java automation scripts.
- Supported manual and backend testing, including SQL validation.
- Participated in test case design, execution, defect tracking, SDLC, STLC and Agile methodologies.

SELECTED PROJECTS

Spectrum Mobile Application | Charter Communications

Technology: Python, Behave, Selenium, Appium, ADB, GitLab CI/CD, Docker

Built BDD-based automation, implemented real-device testing, and integrated scheduled smoke and full regression execution into GitLab CI/CD.

Mobile Automation | T-Mobile

Technology: Python, Appium, SQL, Pandas, TestNG

Automated phones, messaging and calling workflows; performed API/database validation, data warehouse and ETL validation, and built reusable Python backend validation utilities.

QBE Insurance | Cognizant Technology Solutions

Technology: Guidewire PolicyCenter, BillingCenter, ClaimsCenter, Selenium, Cucumber, SQL

Supported Guidewire testing and automation with backend SQL validation and cross-system integration testing.

Salesforce Service Cloud | Blue Cloud

Technology: Selenium, TestNG, Salesforce

Automated case management, email-to-case and escalation workflows and supported UI/performance validation.

KEY ACHIEVEMENTS

- Built and scaled end-to-end automation frameworks using Selenium, Appium, TestNG, Python and BDD, reducing regression execution time by 40–60%.
- Integrated automation suites into Jenkins, GitLab and Docker CI/CD pipelines for continuous testing and faster feedback.
- Automated cross-platform testing across web, Android and iOS applications, cutting manual testing effort by 50%.
- Led end-to-end testing efforts as POC for multiple applications, including smoke, regression, UAT and release sign-off activities.
- Improved mobile reliability through validation across multiple devices, OS versions and network conditions.
- Enabled data-driven reporting and trend analysis and strengthened cloud-native test execution using AWS, Docker and Kubernetes.

EDUCATION

University of Denver – University College | Master's in Information and Communication Technology | September 2022 – June 2024
